STYLISH ALEN 55 AND ALEN 68 MAKE THEIR DEBUTS

ALEN YACHTS' PRACTICAL AND SLEEK Alen 55 was showcased at the Monaco Yacht Show in September. Her centre console, walk-around deck and deep bulwarks create a safe environment for guests to enjoy the outdoors.

The yacht boasts the latest navigation equipment and the interior can be customised for each owner. Teak flooring, leather wall panels and lacquered surfaces produce a warm, natural ambiance. She can comfortably welcome up to eight guests.

Alen Yachts also introduced the Alen 68 recently. The company joined forces with architects Foster + Partners to create a fast-yet-elegant yacht with plenty of room for socialising. The flexible design allows up to three cabins. Guests are able to enjoy abundant deck space and panoramic views. The contours of the hull are exposed to reveal the smooth lines of the yacht.

THE DEEPFLIGHT DRAGON – A COMPACT, LIGHTWEIGHT PERSONAL SUB

THE DEEPFLIGHT DRAGON is so intuitive and easy to use that clients are able to self-pilot the craft with minimal instruction. DeepFlight has already integrated its submarines into sailing and motoryacht operations and is the first personal submarine manufacturer to sell its craft for resort and tourism operations.

The all-electric (zero emissions) DeepFlight Dragon was designed for easy use from yacht or shore to explore the twilight zone down to 400 feet (120m). At 3,968 pounds (1,800 kg) and under 5ft (1.5m) in height, the Dragon readily fits into existing yacht garages or deck areas. Like all DeepFlight personal submarines, the Dragon is positively buoyant, meaning the craft automatically floats to the surface. The Dragon is the first DeepFlight craft to use vertical thrust, thus enabling a hover capability.

“We have made a giant leap forward in introducing our newest submarine, the DeepFlight Dragon,” says Adam Wright, President of DeepFlight. “We now offer the lowest weight and lowest profile personal submersible available, and the only such craft that offers both hover and flight capabilities and comes equipped with a built-in Dive Manager. We believe the Dragon will open the market for subsea recreation at a large scale and anticipate that you will soon be seeing DeepFlight craft at more resort and marina locations around the world.”

DeepFlight has over 45 years’ experience innovating the most advanced underwater craft, including its flagship – the DeepFlight Super Falcon, which pioneered underwater flight.

“While humans have long dreamed of flying machines, we have actually realised this dream by building craft that fly underwater,” says Graham Hawkes, DeepFlight’s Founder and Chief Executive Officer. “Over the last 20 years we have tested and proven five generations of personal submarines, with each generation breaking through to new and powerful capabilities. With the DeepFlight Dragon, we wanted people to fully enjoy the experience of flying a submarine on their own. After all, no one buys a sports car and then gives the keys to a chauffeur.”

BENETTI INTRODUCES THE VELOCE 140' IN FORT LAUDERDALE

THE BENETTI VELOCE 140' made her debut at the Fort Lauderdale International Boat Show (Oct 30-Nov 3). The most distinguishing feature of the Veloce 140' is the Displacement to Planing (D2P) hull designed by Pierluigi Ausonio Naval Architecture Studio and the Azimut | Benetti Research and Development Centre. The most obvious advantages are the energy-saving, 12-knot cruising speed and the ability to travel at more than 20 knots in total comfort.

Stefano Righini developed the exterior styling and concept, while the interior design is the work of the British company Redman Whiteley Dixon in collaboration with the owner's designer.

The Veloce 140' boasts the largest engines ever mounted at the Viareggio Benetti shipyard – two MTU 12V 4000 M93L 3500hp engines.

She is also equipped with CMC Marine electrical fin stabilisers.

The sun deck covers more than 77sqm and is dominated by a central pool. At the bow of the upper deck there is the yacht's second, deeper pool. The bridge has a large gym spanning the entire hull width. One of its main features is a side terrace with stunning views of the sea. Further astern, there is a dining area for 12 and a living area that extends outdoors.

The lower deck leads to the sleeping area, which consists of five cabins. This deck also features a beach club area. The garage can accommodate two tenders.
